NEWS RELEASE

DRILLING INTERSECTS 31.54 G/T GOLD ON SCOTTIE GOLD PROPERTY

Rotation Minerals Ltd. (the "Company") is pleased to announce drill results from the Scottie Gold property and update exploration on the 4-J property.

During the 2016 field season on the Scottie property, the Company focused on outlining gold bearing areas outside of the immediate area of the mine workings.

Diamond drilling was carried out on an area called the "C" and "D" zones in previous work. This area is 2 km NE of the mine workings and is readily accessible through the nearby mine access tunnel. Drilling was conducted on the "C" zone in the area of historic gold assays that included 35.93 g/t over 1.74 m and 72.20 over 0.76 m in 2 separate veins. On the "D" zone located 50 m from the "C" zone, historic sampling yielded gold values of 198.64 g/t over 0.73 m and 27.79 g/t over 1.52 m. A 1946 drill hole intersected 67.11 g/t gold over 1.0 m. *The reader is cautioned that the above results are historic and have not been confirmed by the Company. These are being used for reference purposes and should not be relied upon.*

Drilling by the Company intersected up to 1.13 m of 31.54 g/t gold in DDH-SG-4. Drilling was primarily focused on the intersection of the projected "C" and "D" veins. Highlights of the drilling are shown below:

DRILL HOLE	From (m)	To (m)	Width (m)	Au g/t
SG-16-2	**26.01**	**26.62**	**0.61**	**23.50**
SG-16-3	**17.68**	**20.79**	**3.10**	**5.04**
Incl.	**17.68**	**19.21**	**1.52**	**8.08**
SG-16-4	**7.16**	**10.52**	**3.35**	**3.42**
and	**55.71**	**56.92**	**1.13**	**31.54**
SG-16-5	**7.47**	**9.05**	**1.65**	**9.87**
and	**16.60**	**21.95**	**3.35**	**6.0**

SG-16-7	**6.71**	**11.28**	**4.57**	**3.20**
and	**19.21**	**22.26**	**3.05**	**8.60**
SG-16-8	**61.89**	**62.26**	**0.37**	**12.27**
SG-16-11	**21.71**	**26.52**	**4.82**	**2.63**
SG-16-14	**66.77**	**57.16**	**0.40**	**14.54**

Within the 2016 drilling, numerous intersections grading 1-2 g/t gold were also encountered.

The Company also announces that surface geological work has located new zones of mineralization and is awaiting assay results for sampling on these zones.

On the 4-J property, the Company drilled 2 holes testing a geophysical anomaly. Quartz-breccia zones carrying sphalerite and bournonite were intersected in both holes. Previous drilling that intersected the quartz breccia with sulphide contained gold-silver-lead-zinc and antimony values. These intersections are along the wall zones to Premier porphyry dykes (part of the Texas Creek Plutonic suite that is associated with gold mineralization at Brucejack Lake, Premier gold mine and the Scottie gold mine). In addition, brecciated argillite contained coarse pyrite along fractures along with local minor galena. Assay results will be released when the Company receives them.

All samples are assayed by Loring Laboratories of Calgary, Alberta. It is an ISO9001 certified laboratory. All gold assays are analyzed by fire methods which includes gravimetric finishes on the individual samples.

Ed. Kruchkowski, P. Geo., a qualified person under National Instrument 43-101, is in charge of the exploration programs on behalf of the Company and is responsible for the contents of this release. E. Kruchkowski is not independent of Mountain Boy as he is the president and a director of the Company.

ABOUT ROTATION MINERALS LTD.

The Company's main assets are the option on the 4-J property and Scottie Gold Mine in the Stewart area of BC.

ON BEHALF OF THE BOARD
